

QUERY OUTPUTS:

1) employee_deets:

	employee_id int	name varchar	department_name varchar	role varchar
>	1	Krishna Prasad	HR	Manager
>	2	Anita Sharma	IT	Developer
>	3	Rahul Verma	IT	Developer
>	4	Sneha Iyer	Finance	Analyst
>	5	Arjun Reddy	HR	Manager

2) payroll_test:

	employee_id int	employee_name varchar	base_salary decimal	bonus decimal	hra decimal	pf decimal	absent_days decimal	half_days decimal	per_day_salary decimal	deductions decimal	net_salary decimal
>	1	Krishna Prasad	50000.00	5000.00	10000.00	3000.00	1	0	1666.666667	1666.666667	60333.333333
>	2	Anita Sharma	40000.00	4000.00	8000.00	2500.00	0	0	1333.333333	0.000000	49500.000000
>	3	Rahul Verma	45000.00	3000.00	9000.00	2700.00	0	0	1500.000000	0.000000	54300.000000
>	4	Sneha Iyer	35000.00	2000.00	7000.00	2000.00	0	1	1166.666667	1166.666667	40833.333333
>	5	Arjun Reddy	60000.00	6000.00	12000.00	3500.00	0	0	2000.000000	0.000000	74500.000000

3) salary_eff:

	employee_id int	base_salary decimal(10,2)	* effective_from date	effective_to date
>	1	50000.00	2024-01-01	(NULL)
>	2	40000.00	2024-01-01	(NULL)
>	3	45000.00	2024-01-01	(NULL)
>	4	35000.00	2024-01-01	(NULL)
>	5	60000.00	2024-01-01	(NULL)

4)curr_salary:

The screenshot shows a database query result in a dark-themed interface. At the top, there is a search bar labeled 'Search Results' and a toolbar with various icons including a gear, a mail icon, a person icon, plus signs, a trash can, circular arrows, and an 'Export' button. The result is a table with four columns: 'employee_id' (int), 'employee_name' (varchar), 'gross_salary' (decimal), and 'net_salary' (decimal). The table contains five rows of data. The interface also shows a 'Cost: 5ms' indicator on the right.

employee_id int	employee_name varchar	gross_salary decimal	net_salary decimal
1	Krishna Prasad	65000.00	62000.00
2	Anita Sharma	52000.00	49500.00
3	Rahul Verma	57000.00	54300.00
4	Sneha Iyer	44000.00	42000.00
5	Arjun Reddy	78000.00	74500.00

EMPLOYEE GENDER, EMPLOYEE STATUS are look up tables to encounter better data relationships and typos

EMPLOYEE-DEPARTMENT, EMPLOYEE-ROLE are junction tables to handle many to many relationships

RELATIONSHIPS:

employee → gender : many to one

Employee ↔ Department: many to many

Employee ↔ Roles: many to many

Employee → Salary History : one to many

Employee → Attendance: one to many

Employee → Leave Management : one to many

Employee → Payroll : one to many

Used cascade constraint to delete child references if parent's data or row is deleted

eg if employee_id is deleted their corresponding attendance, payroll, leave management will be deleted.
